

Business Continuity Plan (BCP) - Data Services

Company A
Ministry of Health - Kingdom of Saudi Arabia

Document Control

Field	Details
Document Title	Business Continuity Plan - Data Services
Document ID	RM-BCP-005
Version	2.3
Effective Date	May 15, 2024
Last Review Date	May 1, 2024
Next Review Date	May 15, 2025
Classification	CONFIDENTIAL
Owner	Chief Data Officer (CDO)
Approver	Business Continuity Manager
Related Documents	Security_Incident_Response_Plan_v3.0, Data_Backup_

Version History

Version	Date	Author	Changes
1.0	March 2022	Mohammed Al-Zahrani (IT Manager)	Initial BCP for Data Services
2.0	January 2023	Dr. Yasser Al-Najjar (CDO)	Added cloud failover procedures (AWS/Azure)
2.1	August 2023	Mohammed Al-Zahrani	Updated RTO/RPO based on 2023 DR test results
2.2	January 2024	Dr. Yasser Al-Najjar	Added pandemic continuity procedures
2.3	May 2024	Dr. Yasser Al-Najjar	Updated contact list, added Colibra failover

Table of Contents

1. [Purpose and Scope](#1-purpose-and-scope)

2. [Business Impact Analysis (BIA)](#2-business-impact-analysis-bia)
3. [Recovery Objectives](#3-recovery-objectives)
4. [Critical Data Services](#4-critical-data-services)
5. [Recovery Strategies](#5-recovery-strategies)
6. [BCP Activation Procedures](#6-bcp-activation-procedures)
7. [Roles and Responsibilities](#7-roles-and-responsibilities)
8. [Communication Plan](#8-communication-plan)
9. [Recovery Procedures](#9-recovery-procedures)
10. [Testing and Maintenance](#10-testing-and-maintenance)
11. [Appendices](#11-appendices)

1. Purpose and Scope

1.1 Purpose

This Business Continuity Plan (BCP) ensures the continuity of Data Services during disruptions, minimizing impact on:

- Patient care (healthcare data availability)
- Regulatory compliance (NDMO, PDPL reporting)
- Business operations (executive decision-making, payroll)

1.2 Scope

In-Scope Data Services:

- Executive Dashboards and Business Intelligence (BI)
- Patient Lookup API (Epic EHR integration)
- Data Quality Monitoring (Informatica IDQ)
- Data Catalog (Collibra)
- ETL/Data Pipelines (Informatica PowerCenter)
- Payroll Data Processing (Oracle EBS integration)
- Regulatory Reporting (NDMO, PDPL, NCA compliance)

In-Scope Disruption Scenarios:

- Data Center outage (power failure, hardware failure, fire, flood)
- Cybersecurity incident (ransomware, DDoS attack)
- Pandemic/epidemic (staff unavailability)
- Natural disaster (earthquake, sandstorm)
- Telecommunications failure (internet outage)

Out of Scope:

- Epic EHR application (covered by separate Epic BCP)
- Oracle EBS financial system (covered by Finance BCP)
- Physical facility evacuation (covered by Facilities BCP)

1.3 Plan Objectives

1. Minimize Downtime: Restore critical data services within defined Recovery Time Objectives (RTO)
2. Protect Data Integrity: Ensure no data loss beyond Recovery Point Objective (RPO)
3. Maintain Compliance: Continue regulatory reporting during disruption
4. Enable Remote Operations: Allow Data Team to work remotely during facility disruption

2. Business Impact Analysis (BIA)

2.1 Impact Categories

Impact Category	Description	Severity Scale
Patient Safety	Impact on patient care or health outcomes	Critical (1) - Low (4)
Financial	Revenue loss, regulatory fines, legal costs	Critical (1) - Low (4)
Regulatory	Non-compliance with NDMO, PDPL, NCA	Critical (1) - Low (4)
Reputational	Damage to Company A's public image	Critical (1) - Low (4)
Operational	Disruption to business processes	Critical (1) - Low (4)

2.2 Business Impact Assessment by Service

Data Service	Patient Safety	Financial	Regulatory	Reputational	Operational	Overall Criticality
Patient Lookup API	1 (Critical)	2 (High)	2 (High)	2 (High)	1 (Critical)	CRITICAL
Data Quality Monitoring	3 (Medium)	3 (Medium)	2 (High)	3 (Medium)	2 (High)	HIGH
Executive Dashboards	4 (Low)	2 (High)	3 (Medium)	2 (High)	2 (High)	HIGH
Data Catalog (Collibra)	4 (Low)	3 (Medium)	2 (High)	3 (Medium)	3 (Medium)	MEDIUM
Regulatory Reporting	3 (Medium)	1 (Critical)	1 (Critical)	2 (High)	2 (High)	CRITICAL
Payroll Processing	4 (Low)	2 (High)	3 (Medium)	2 (High)	2 (High)	HIGH
ETL Pipelines	3 (Medium)	3 (Medium)	3 (Medium)	3 (Medium)	2 (High)	MEDIUM

2.3 Maximum Tolerable Period of Disruption (MTPD)

Data Service	MTPD	Justification
Patient Lookup API	1 hour	Clinicians need patient data for treatment decisio
Data Quality Monitoring	24 hours	DQ issues can accumulate but not immediately criti
Executive Dashboards	48 hours	Executives can use static reports temporarily

Data Catalog (Collibra)	72 hours	Data stewards can work offline temporarily
Regulatory Reporting	5 days	Most reports have monthly deadlines
Payroll Processing	5 days	Payroll runs bi-weekly, buffer time exists
ETL Pipelines	24 hours	Data warehouse updates can be delayed

3. Recovery Objectives

3.1 Recovery Time Objective (RTO)

Definition: Maximum acceptable time to restore service after disruption

Data Service	RTO	Priority
Patient Lookup API	1 hour	P1 - Critical
Data Quality Monitoring	8 hours	P2 - High
Executive Dashboards	24 hours	P2 - High
Regulatory Reporting	48 hours	P2 - High
Payroll Processing	72 hours	P3 - Medium
Data Catalog (Collibra)	48 hours	P3 - Medium
ETL Pipelines	12 hours	P2 - High

3.2 Recovery Point Objective (RPO)

Definition: Maximum acceptable data loss measured in time

Data Service	RPO	Backup Frequency
Patient Lookup API	15 minutes	Real-time replication to DR
Data Quality Monitoring	1 hour	Hourly incremental backup
Executive Dashboards	4 hours	4-hourly snapshot
Regulatory Reporting	24 hours	Daily full backup
Payroll Processing	24 hours	Daily full backup
Data Catalog (Collibra)	4 hours	4-hourly snapshot
ETL Pipelines	1 hour	Hourly transaction log backup

3.3 Recovery Capability Summary

Metric	Target	Actual (Last DR Test)	Status
Patient Lookup API RTO	1 hour	58 minutes ■	Pass
Patient Lookup API RPO	15 minutes	12 minutes ■	Pass
Executive Dashboards RTO	24 hours	18 hours ■	Pass
Overall BCP Test Success Rate	100%	100% ■	Pass

4. Critical Data Services

4.1 Service 1: Patient Lookup API

Description: Real-time API providing patient demographics, medical history, and current medications to clinicians via Epic EHR

Technical Components:

- API Gateway (Azure API Management)
- Backend Database (Oracle 19c on AWS RDS)
- Read Replica (Oracle 19c on AWS RDS - DR Region)
- Caching Layer (Redis Enterprise)

Dependencies:

- Epic EHR (consumer)
- Oracle Database (backend)
- AWS VPC networking
- SSL certificates (DigiCert)

Recovery Strategy: Automatic failover to read-only replica in Jeddah DR site

Workaround (if failover fails): Clinicians use Epic "Offline Mode" with cached patient data (limited to last 72 hours)

4.2 Service 2: Executive Dashboards

Description: Business Intelligence dashboards showing KPIs (bed occupancy, patient satisfaction, financial metrics)

Technical Components:

- Power BI Service (Microsoft 365)
- Data Warehouse (Azure Synapse Analytics)
- ETL Pipelines (Informatica PowerCenter)
- Semantic Layer (Power BI datasets)

Dependencies:

- Azure Synapse (data source)

- Microsoft 365 (hosting)
- Informatica (data refresh)

Recovery Strategy: Switch to static PDF reports generated daily and emailed to executives

Workaround (if dashboards unavailable):

1. Data Team generates static Excel reports from backup data
2. Reports emailed to executive distribution list
3. Frequency: Daily until dashboards restored

4.3 Service 3: Payroll Data Processing

Description: Bi-weekly payroll data extraction from SAP HR, transformation, and loading to Oracle EBS for payment processing

Technical Components:

- SAP SuccessFactors (source)
- Informatica PowerCenter (ETL)
- Oracle EBS (target)
- Payroll validation scripts (Python)

Dependencies:

- SAP HR (source data)
- Oracle EBS (payment processing)
- HR Department (approval workflow)

Recovery Strategy: Manual payroll processing using last known good data

Workaround (if ETL fails):

1. HR exports employee data manually from SAP
2. Finance manually enters payroll in Oracle EBS
3. CEO approves emergency manual payroll (requires written authorization)
4. Maximum delay: 5 business days from scheduled payday

4.4 Service 4: Regulatory Reporting (NDMO/PDPL)

Description: Automated generation of compliance reports for NDMO (monthly) and PDPL (quarterly)

Technical Components:

- Compliance reporting database (PostgreSQL)
- Report generation scripts (Python + Jinja2)
- Document storage (SharePoint)
- Submission portal access (NDMO/SDAIA portals)

Dependencies:

- Data Catalog (source for data inventory)

- Incident Management (source for breach data)
- Legal Department (report approval)

Recovery Strategy: Manual report generation from backup data

Workaround:

1. Data Governance Team manually compiles data from offline backups
2. Reports generated using Excel templates
3. Legal Counsel reviews and approves
4. Manual submission to NDMO/SDAIA portals

5. Recovery Strategies

5.1 Primary Strategy: DR Site Failover

Description: Automatic or manual failover to Disaster Recovery site in Jeddah

DR Site Details:

- Location: Jeddah, Al-Madinah Road (200km from Riyadh primary site)
- Infrastructure: AWS Region me-central-1 (Bahrain) + Azure Region UAE North
- Replication: Real-time for P1 services, 4-hourly for P2/P3 services
- Capacity: 100% of production capacity (hot standby)

Failover Process:

1. Detection: Monitoring alerts indicate primary site failure
2. Decision: Incident Commander authorizes failover (within 15 minutes)
3. DNS Switch: Update DNS records to point to DR site (within 5 minutes)
4. Validation: Data Team validates service availability (within 30 minutes)
5. Communication: Notify stakeholders of failover completion

Failback Process:

1. Primary site restored and validated
2. Data synchronized from DR to primary (may take 24-48 hours)
3. Scheduled failback during maintenance window (Sunday 2-6 AM)
4. DNS switched back to primary
5. DR site returned to standby mode

5.2 Secondary Strategy: Cloud Failover

Description: If both Riyadh and Jeddah sites unavailable, failover to public cloud

Cloud Resources:

- AWS me-central-1 (Bahrain): Patient Lookup API, Data Warehouse
- Azure UAE North: Power BI, Data Catalog

Activation Criteria: Both physical sites unavailable for >4 hours

Limitations:

- Data currency: RPO may be 24 hours (last daily backup to cloud)
- Performance: May be degraded due to network latency
- Cost: Cloud burst charges apply (estimated 50,000 SAR/day)

5.3 Tertiary Strategy: Manual Operations

Description: If all automated systems fail, operate manually

Manual Procedures:

- Patient data: Clinicians use paper-based records (emergency only)
- Payroll: Manual check issuance (CFO authorization required)
- Reporting: Manual data compilation from offline backups

Activation Criteria: All automated recovery strategies failed

6. BCP Activation Procedures

6.1 Activation Triggers

Trigger Event	Severity	Activation Level	Decision Authority
Data Center power failure >30 minutes	High	Full BCP Activation	Incident Commander
Ransomware detected on data servers	Critical	Full BCP Activation	CISO + Incident Commander
Network connectivity loss >1 hour	High	Partial BCP (affected services)	IT Manager
Pandemic (>30% staff unavailable)	High	Remote Operations Mode	CEO
Natural disaster (earthquake, flood)	Critical	Full BCP Activation	CEO

6.2 Activation Process

Step 1: Detection and Assessment (0-15 minutes)

1. Monitoring system alerts on-call engineer
2. On-call engineer assesses severity and impact
3. On-call engineer notifies Incident Commander
4. Incident Commander convenes emergency assessment call (within 15 minutes)

Step 2: BCP Activation Decision (15-30 minutes)

1. Incident Commander reviews situation with technical leads
2. If criteria met, Incident Commander declares "BCP ACTIVATED"
3. Incident Commander selects appropriate recovery strategy
4. Incident Commander notifies CEO and CISO

Step 3: Recovery Execution (30 minutes - RTO)

1. Data Team Lead initiates failover procedures
2. Technical teams execute recovery playbooks
3. Regular status updates every 30 minutes
4. Incident Commander coordinates with business stakeholders

Step 4: Service Restoration Validation (RTO + 1 hour)

1. Data Team validates service functionality
2. Business users confirm service usability
3. Incident Commander declares "SERVICES RESTORED"
4. Post-incident review scheduled

6.3 Activation Communication

BCP Activation Announcement Template:

SUBJECT: [URGENT] BCP ACTIVATION - Data Services

TO: All Stakeholders

FROM: [Incident Commander Name]

DATE: [Date/Time]

SITUATION: [Brief description of incident]

IMPACT: [Affected services and estimated downtime]

ACTIONS TAKEN: [Recovery strategy activated]

EXPECTED RESTORATION: [Estimated time]

NEXT UPDATE: [Time of next communication]

CONTACT: [Incident Commander phone/email]

7. Roles and Responsibilities

7.1 BCP Team Structure

Role	Name	Contact	Responsibilities
Business Continuity Manager	Faisal Al-Shehri (CISO)	+966-50-XXX-XXXX	Overall BCP ownership, annual review, testing coordination
Incident Commander	Mohammed Al-Zahrani (IT Manager)	+966-50-XXX-XXXX	Activation decision, recovery coordination, communication
Data Team Lead	Dr. Yasser Al-Najjar (CDO)	+966-50-XXX-XXXX	Data services recovery, technical decisions, validation
Infrastructure Lead	Turki Al-Qahtani (Sr. Sys Admin)	+966-50-XXX-XXXX	Server/network failover, DR site operations

Database Lead	Ahmed Al-Rashid (DBA)	+966-50-XXX-XXXX	Database failover, data integrity validation
Communications Lead	Sara Al-Mutairi (Comms Director)	+966-50-XXX-XXXX	Stakeholder notifications, media liaison
Executive Sponsor	Dr. Abdullah Al-Fahad (CEO)	+966-50-XXX-XXXX	Strategic decisions, resource authorization

7.2 Escalation Matrix

Issue	Level 1 (0-30 min)	Level 2 (30-60 min)	Level 3 (>60 min)
Technical recovery failure	Data Team Lead	IT Manager	CISO
Resource shortage	IT Manager	CISO	CEO
Vendor non-response	Data Team Lead	Procurement	CEO
Media inquiry	Communications Lead	CEO	Board Chair
Regulatory inquiry	DPO	Legal Counsel	CEO

8. Communication Plan

8.1 Communication Channels

Channel	Purpose	Audience	Backup
Corporate Email	Primary notifications	All staff	Personal email (emergency only)
Microsoft Teams	Team coordination	BCP Team	Zoom (backup)
WhatsApp Group	Emergency coordination	BCP Team (business phones)	SMS
Phone Tree	Executive notification	C-Suite	Personal mobile
Public Website	External communication	Public/patients	Social media

8.2 Notification Timeline

Time	Audience	Message	Channel
T+0 (Activation)	BCP Team	BCP Activated, join emergency call	WhatsApp + Teams
T+15 min	C-Suite	Situation brief, expected impact	Phone call
T+30 min	All IT Staff	Service status, instructions	Corporate Email
T+1 hour	All Staff	Service disruption notice	Corporate Email
T+2 hours	External (if needed)	Public statement	Website
Every 2 hours	All Staff	Status update	Corporate Email

Service Restored	All Staff	Services restored notice	Corporate Email
------------------	-----------	--------------------------	-----------------

8.3 Stakeholder Contact List

Stakeholder	Name	Role	Primary Contact	Backup Contact
CEO	Dr. Abdullah Al-Fahad	Executive Sponsor	+966-50-XXX-XXXX	ceo@companya.gov.sa
CISO	Faisal Al-Shehri	BC Manager	+966-50-XXX-XXXX	ciso@companya.gov.sa
CDO	Dr. Yasser Al-Najjar	Data Services Owner	+966-50-XXX-XXXX	cdo@companya.gov.sa
CFO	Layla Al-Harbi	Finance (payroll)	+966-50-XXX-XXXX	cfo@companya.gov.sa
AWS Support	N/A	Cloud provider	aws.amazon.com/support	1-800-XXX-XXXX
Microsoft Support	N/A	Cloud provider	support.microsoft.com	1-800-XXX-XXXX
Oracle Support	N/A	Database vendor	support.oracle.com	1-800-XXX-XXXX

9. Recovery Procedures

9.1 Patient Lookup API Recovery

Playbook ID: BCP-REC-001

RTO: 1 hour

RPO: 15 minutes

Prerequisites:

- DR site database synchronized (verify replication lag <15 min)
- SSL certificates valid on DR site
- Network connectivity to DR site confirmed

Recovery Steps:

Step	Action	Owner	Time	Validation
1	Verify DR database sync status	DBA	5 min	Replication lag <15 min
2	Promote DR database to primary	DBA	10 min	Database accepts writes
3	Update DNS to DR API endpoint	Infra Lead	5 min	DNS propagation confirmed
4	Restart API services on DR	Data Team	5 min	API health check passes
5	Validate API responses	Data Team	10 min	Sample queries return correct data
6	Notify Epic EHR team of failover	Data Team Lead	5 min	Epic team acknowledges
7	Monitor for errors	Data Team	20 min	Error rate <1%

Rollback: If validation fails, revert DNS to primary site (if available) or escalate to Incident Commander

9.2 Executive Dashboard Recovery

Playbook ID: BCP-REC-002

RTO: 24 hours

RPO: 4 hours

Prerequisites:

- Azure Synapse backup available (within 4 hours)
- Power BI Service accessible
- ETL pipelines configuration documented

Recovery Steps:

Step	Action	Owner	Time	Validation
1	Restore Azure Synapse from backup	DBA	2 hours	Database accessible
2	Validate data completeness	Data Team	1 hour	Row counts match expected
3	Restart ETL pipelines	Data Team	1 hour	Pipelines running
4	Refresh Power BI datasets	Data Team	2 hours	Datasets refreshed
5	Validate dashboard visualizations	Data Team	1 hour	KPIs display correctly
6	Notify executives of restoration	Comms Lead	30 min	Executives confirm access

Workaround (while recovering):

- Generate static PDF reports from backup data
- Email to executive distribution list daily
- PDF reports stored in SharePoint: /Emergency/Executive-Reports/

9.3 Payroll Processing Recovery

Playbook ID: BCP-REC-003

RTO: 72 hours

RPO: 24 hours

Prerequisites:

- Last payroll backup available (within 24 hours)
- Oracle EBS accessible (Finance BCP)
- HR data export from SAP available

Recovery Steps:

Step	Action	Owner	Time	Validation
1	Obtain HR data export from SAP	Data Team	4 hours	CSV file with employee data
2	Validate employee records	HR Department	8 hours	All 850 employees accounted
3	Calculate payroll manually	Finance Team	16 hours	Gross/net pay calculated
4	Load payroll to Oracle EBS	Finance Team	4 hours	Payroll journal created
5	CFO approval	CFO	2 hours	Written approval obtained
6	Process payments	Finance Team	4 hours	Bank transfers initiated
7	Notify employees	HR Department	2 hours	Payment confirmation sent

Manual Workaround (if Oracle EBS unavailable):

- CFO authorizes emergency check issuance
- Manual checks printed from backup checkbook
- Employees receive physical checks at HR office

10. Testing and Maintenance

10.1 Testing Schedule

Test Type	Frequency	Scope	Owner	Last Test	Next Test
Tabletop Exercise	Quarterly	Scenario walkthrough, no system changes	BC Manager	March 2024	June 2024
Technical Failover Test	Bi-annually	Actual failover to DR, no production traffic	Data Team Lead	November 2023	May 2024
Full DR Test	Annually	Complete failover with production data	BC Manager	November 2023	November 2024
Communication Test	Quarterly	Test notification systems and contact list	Comms Lead	April 2024	July 2024

10.2 Last Test Results (November 2023)

Service	RTO Target	Actual Recovery Time	Status
Patient Lookup API	1 hour	58 minutes	■ Pass
Executive Dashboards	24 hours	18 hours	■ Pass
Payroll Processing	72 hours	48 hours	■ Pass
Regulatory Reporting	48 hours	36 hours	■ Pass
Overall Success Rate	100%	100%	■ Pass

Lessons Learned:

1. DNS propagation took longer than expected (15 min vs. planned 5 min) → Updated playbook

- 2. DBA was on vacation during test → Implemented backup DBA training
- 3. WhatsApp group had outdated phone numbers → Updated contact list

10.3 Plan Maintenance

Activity	Frequency	Owner	Last Update
Review and update BCP document	Annually	BC Manager	May 2024
Update contact list	Quarterly	Comms Lead	April 2024
Review recovery procedures	After each test	Data Team Lead	November 2023
Review dependencies and systems	Annually	Data Team Lead	May 2024
Executive briefing on BCP	Annually	BC Manager	January 2024

11. Appendices

Appendix A: BCP Activation Checklist

Incident Commander Checklist:

- Assess incident severity and impact
- Convene emergency call with technical leads
- Determine if BCP activation criteria met
- Select appropriate recovery strategy
- Declare "BCP ACTIVATED" and communicate to team
- Notify CEO and CISO
- Assign roles and tasks to BCP Team
- Establish regular status update cadence
- Coordinate communications to stakeholders
- Document all decisions and actions
- Declare "SERVICES RESTORED" when validated
- Schedule post-incident review

Appendix B: Emergency Contact List

Priority	Name	Role	Primary Phone	Backup Phone	Email
1	Mohammed Al-Zahrani	Incident Commander	+966-50-XXX-XXXX	+966-11-XXX-XXXX	mohammed.zahrani@companya.gov.sa
2	Dr. Yasser Al-Najjar	Data Team Lead	+966-50-XXX-XXXX	+966-11-XXX-XXXX	yasser.najjar@companya.gov.sa
3	Faisal Al-Shehri	BC Manager / CISO	+966-50-XXX-XXXX	+966-11-XXX-XXXX	faisal.shehri@companya.gov.sa

4	Dr. Abdullah Al-Fahad	CEO	+966-50-XXX-XXXX	+966-11-XXX-XXXX	abdullah.fahad@companya.gov.sa
5	Turki Al-Qahtani	Infrastructure Lead	+966-50-XXX-XXXX	+966-11-XXX-XXXX	turki.qahtani@companya.gov.sa
6	Ahmed Al-Rashid	Database Lead	+966-50-XXX-XXXX	+966-11-XXX-XXXX	ahmed.rashid@companya.gov.sa
7	Sara Al-Mutairi	Communications Lead	+966-50-XXX-XXXX	+966-11-XXX-XXXX	sara.mutairi@companya.gov.sa

Appendix C: Vendor Emergency Contacts

Vendor	Service	Support Portal	Phone	SLA
AWS	Cloud infrastructure	aws.amazon.com/support	1-800-XXX-XXXX	15 min response (Business Support)
Microsoft	Azure, Power BI, M365	support.microsoft.com	1-800-XXX-XXXX	1 hour response (Premier Support)
Oracle	Database	support.oracle.com	1-800-XXX-XXXX	30 min response (Severity 1)
Informatica	ETL, Data Quality	support.informatica.com	1-800-XXX-XXXX	2 hour response
Collibra	Data Catalog	support.collibra.com	1-800-XXX-XXXX	4 hour response
Palo Alto	Network Security	support.paloaltonetworks.com	1-800-XXX-XXXX	1 hour response

Appendix D: DR Site Information

Location: Jeddah, Al-Madinah Road, Building 45

Connectivity:

- Primary: 1 Gbps dedicated fiber (STC)
- Backup: 500 Mbps MPLS (Mobily)
- Last Mile: 100 Mbps 4G LTE (emergency)

Infrastructure:

- Servers: 20 physical servers (HP ProLiant)
- Storage: 500 TB SAN (NetApp)
- Network: Palo Alto firewall, Cisco switches
- Power: Dual UPS (APC), diesel generator (48 hours fuel)
- Cooling: N+1 redundant CRAC units

Access:

- Biometric access control (authorized personnel only)
- 24/7 security guard
- CCTV surveillance

Contact: Jeddah DR Site Manager - Khalid Al-Otaibi (+966-50-XXX-XXXX)
